

WD GENERAL GUIDE ON WASTE MANAGEMENT

Background

Rather than bore you with the statistics about which sector produces what waste lets can get the heart of the issue by explaining why you should be carefully consider waste management and what incentives exist to help persuade you to do so. Some of the reasons to act include:

- Duty of Care Regulations
- Landfill Regulations
- Hazardous Waste Regulations
- Environmental Permitting Regulations
- Statutory requirement for Site Waste Management Plans
- Landfill Tax
- Costs associated with waste disposal
- The potential to manufacture valuable products from waste

WD Environmental work for a wide range of clients, including both government and private sector. We are able to tailor our work to suit complex needs, supporting in the following ways:

- Waste audits
- Due diligence audits
- Waste classification (hazardous, non-hazardous, inert)
- Environmental Permitting
- Site Waste Management Plans
- Waste brokerage
- Duty of Care audits on suppliers
- Liaison with the Environment Agency and Local Planning Authority
- Definition of wastes
- Resource efficiency projects

What does this mean to me?

As well as complying with legislation we believe it is important to improve operational capacity of businesses by improving waste management systems. The results of our work are usually pleasing due to successful project management concluding with bottom line savings.
