

WD GENERAL GUIDE ON RESOURCE EFFICIENCY SERVICE

Background

Given the current economic climate and the drive to ever reduce business operational costs, there is a need for businesses to review areas where cost savings can be made. One of these areas is resource efficiency that covers items such as waste, water and energy. It is possible to make significant cost savings in these areas by introducing different work practices and methodologies.

The Government has issued various regulatory incentives to encourage business to look at ways of reducing their wastage and thus achieve the carbon reduction commitment introduced within the Climate Change Bill. This has set certain targets in carbon reduction to be achieved by 2020 and 2050.

One of these incentives is the incorporation of ISO14001 accreditation scheme that requires resource efficiency to be regularly reviewed. It is inevitable that more financial incentives will be introduced as these dates approach.

Areas of Expertise

WD Environmental has experience in undertaking baseline assessments for large industrial facilities or operations to achieve significant reductions in their carbon footprint. We have also assisted numerous companies in reducing energy consumption as part of Environmental Management Systems and ISO 14001 requirements.

How we can help?

WD Environmental offer three Resource Efficiency Options of increasing scale

- Options 1 - 2 day programme comprising site visit for benchmarking, compliance, review of energy, waste and water, followed by training and an implementation plan
- Option 2 – 4 day programme. Option 1 but with additional coaching and training to assist with implementation of BS8555
- Option 3 – 10 day programme. Option 2 but with additional training to senior management to achieve CIEH Environmental Awareness certificate and on implementation of Environmental Management System to ISO 14001.

WD Environmental is able to advise you on any other environmental issues that you might encounter. You can call us at the above number or contact us at contact@wdenvironmental.com
